CATEGORY	Coverage Indicator	Step Order	PREFERRED DRUGS	Coverage Indicator	Step Order	NON-PREFERRED DRUGS	PA Required	Comments	Criteria
**** PLEASE NOTE: All cost effective generics applicable to DEL are considered PREFERRED Drugs. "BASIC" Covered Drugs are bolded with the Coverage Indicator of "MC / DEL".***									
General Criteria for all PDL categories- For more information or help using the PDL, providers may call 1-888-445-0497; members should call 1-866-796-2463. To access PDL and PA materials via the internet: www.mainecarepdl.org									
A: Preferred Drugs- Unless otherwise specified, preferred drugs are available without prior authorization. Step order may apply for preferred drugs in some drug categories as indicated on the PDL. (See item "D" below for explanation of step order.)									
B: Requests for Non-preferred Drugs- Preferred drugs must be tried and failed due to lack of efficacy or intolerable side effects before non-preferred drugs will be approved, unless an acceptable clinical exception is offered on the Prior Authorization form, such as the presence of a condition that prevents usage of the preferred drug or a significant potential drug interaction between another drug and the preferred drug(s) exists.									
C: Adequate Drug Trials- 1. The minimum trial period for each preferred and step order drug is two weeks, unless otherwise stated within specific PDL drug categories; trials with less than a two week duration will be reviewed on a case-by-case basis; 2. A trial will not be considered valid if preferred or non-preferred products were readily available (by override, individual purchase, samples, etc.); 3. Certain drug trials, such as with controlled substances, may require evidence that the preferred drugs were actually tried (example: with random pill counts and with random urine drug tests, using the methods of GC/MS with no lower threshold); 4. Adequate trials require documentation of attempts to titrate dose of preferred agents toward desired clinical response. 5. Adequate trials include prevention/treatment of common adverse effects associated with preferred agents (example: antinausea, antipruritics, etc.)									
D: Step Order- When numbers appear in the "step order" column, it means drugs in this category must be used in the order specified, with the lower numbers having preference over the higher numbers. Chart notes should be provided to confirm drug trials that do not appear in the member's MaineCare drug profile.									
E. The Department will institute strategies to ensure cost effectiveness through the use of an enhanced Drug Benefit Preferred brand drugs will no longer be preferred in any PDL drug category where preferred generic drugs are also available. It is expected that preferred generics will be used prior to any preferred brands. This will be operated as a form of step care. Preferred brands in these categories will require prior authorization for these high utilization / high cost members.									
F: Brand Name Medication Requests- (Must be submitted on the Brand Name PA request form)- According to MaineCare Benefits Manual Chapter II (80.07-5), when medically necessary covered brand-name drugs have an A-rated generic equivalent available, the most cost effective medically necessary version will be approved and reimbursed, since the brand-name and A-rated generic drugs have been determined by the FDA to be chemically and therapeutically equivalent. The Bureau does not make determinations as to whether or not a generic drug is clinically inferior or inequivalent to its brand version. This is the proper role of the FDA. Physicians should submit their reports of generic inequivalence directly to the FDA via the MEDWATCH.									
G: PA requests for non- FDA Approved Indications- Decisions will be made on a case-by-case basis until the DUR committee is able to review the evidence and make a recommendation. Interim approvals and DUR recommendations for approval of a drug for a non- FDA approved indication will require a minimum of two published, peer reviewed, non contradicted, double- blind, placebo-controlled randomized clinical studies establishing both safety and efficacy.									
H: Dose Consolidation Requirements- Some drugs may also be affected by dose consolidation requirements. Please see Dose Consolidation List and/or Splitting Tables provided in the PDL.									
I. Trials from Multiple Drug Classes - Trial/failure/intolerance to preferred agents from multiple classes within the same category or other catagories of drugs may be required prior to the approval of non-preferred agents (e.g., Cymbalta, Zofran, Elidel and others).									
J. Drug-specific PA Forms- Drug-specific PA forms contain medical necessity documentation requirements and/or criteria that may not be repeated in the PDL. Drug-specific PA forms may be obtained on the web at *www.mainecarepdl.org* .									
K. PA Exemptions for Prescribers- According to MaineCare Benefits Manual Chapter II (80.07-4), providers may receive a three (3) month exemption from prior authorization requirement for certain categories of drugs when they demonstrate high compliance with the Department's PDL. The Department will notify providers in writing which drug categories are included and what dates apply to the exemption. If a provider loses his/ her exemption, members who previously were not required to obtain a PA while the prescriber was exempt will be required to do so, and criteria for approval of that medication will need to be met.									
L: Drug-Drug Interactions (DDI)- The DUR Committee has implemented new drug-drug interation edits requiring prior authorization. Several drug-drug combinations and PDL drug catagories are affected by new PA requirements. These will be indicated in the PDL with DDI notation. Please see the DDI document provided in the PDL.

FDA notified healthcare professionals that the Victrelis drug label has been revised to state that co-administration of Victrelis (boceprevir), a hepatitis C virus (HCV) protease inhibitor, along with certain ritonavir-boosted human immunodeficiency virus (HIV) protease inhibitors, is not recommended. The findings of a drug-drug interaction study and clinical trial showed that co-administration increased of the possibility of reducing the effectiveness of the medicines, permitting the amount of HCV or HIV virus in the blood to increase. Ritonavir-boosted HIV protease inhibitors include ritonavir-boosted Reyataz (atazanavir), ritonavir-boosted Prezista (darunavir), and Kaletra (lopinavir/ritonavir).
